

CableRail Order Checklist

Make your railing view friendly with the original stainless steel cable infill for wood, metal, and composite railing. Once again Feeney is making it easy for you to understand, find and purchase the original cable railing products.

Step 1: Take this brochure with the option that you like to your contractor or retailer.

Step 2: Tear this page out and hand to your contractor or retailer to start the estimating process.

Railing Design Tips for CableRail

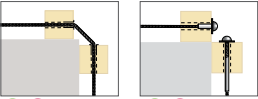

1 SELECT YOUR POST MATERIAL

CableRail infill works on railing frames with wood, metal, or composite-sleeved wood posts in either indoor or outdoor settings.

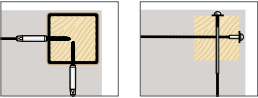

2 SELECT YOUR CORNER TYPE

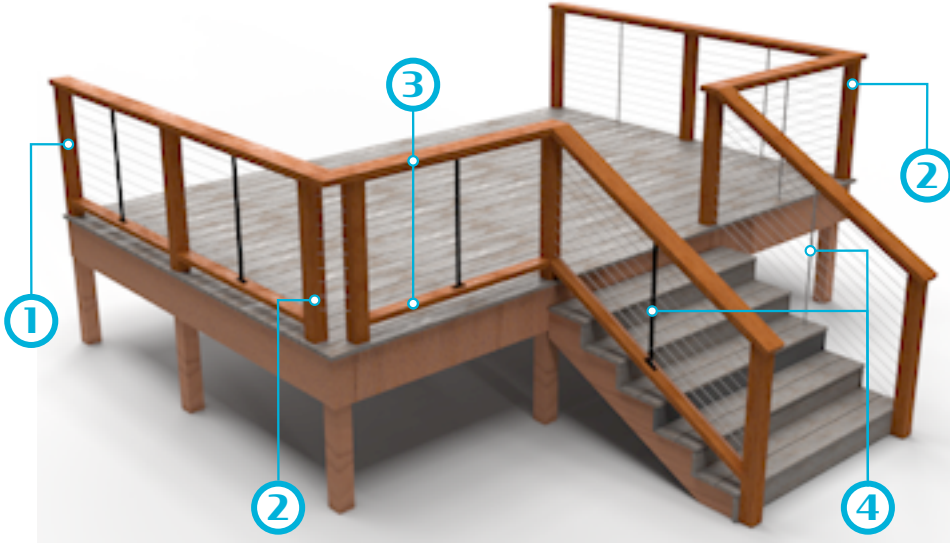

Double corner posts (recommended for wood and metal posts only) allow cables to either run continuously through a corner, requiring fewer fittings, or to easily terminate.

Single corner posts (recommended for composite-sleeved wood posts) are also an option and typically require the cables to terminate at the corner. (To use a single corner with CableRail Kits, one run will be offset by 1/2").

(see website for additional options)

3 DESIGN TOP AND BOTTOM RAIL

Always include a strong, rigid, securely fastened **top rail** to provide necessary strength to the frame and help support the cable tension loads. Underneath the top rail, attach a minimum 1" x 4" **wood blocking** between posts to provide additional lateral reinforcement to the posts.

Bottom rails (optional) add rigidity to railing and can be an attractive and functional foot-rest addition to railing designs.

4 SELECT YOUR PICKET TYPE

Slender **intermediate pickets** may be used instead of some bulkier intermediate posts to achieve a more open railing design while maintaining proper cable spacing. (For picket options see Page 32)
